

ABSTRACT OF THE DISCLOSURE

A method and apparatus for scrolling a display, the scrolling corresponding to the movement of a cursor, which scrolling can be performed on an information apparatus, such as a set top box (STB). The present invention enables a user to control the cursor on the screen via an input device so the cursor moves in an active window having display content. When the cursor is moved to the edge of the window, the window is scrolled to change the displaying region, and the cursor is moved sequentially to about the middle position of the new window.
